

### Minimum General Routing Problem

- Make a comprehensive literature review.
- Identify the existing approaches.
  - Optimize it to implement an existing polynomial-time Heuristic algorithm if any.
  - If not develop your polynomial-time heuristic algorithm.
  - Present the computational complexity of the analysis of the algorithm you have implemented.
  - Make a numerical comparative evaluation of your proposed algorithm via extensive simulations.
  - Prepare a graphical UI that demonstrates the execution of your algorithm.
